PROFILE

Software Engineering graduate with hands-on experience in **mobile and full-stack application development**, specializing in **React Native, Spring Boot and REST API development**. Completed a 6-month internship building scalable cross-platform applications with a focus on performance, clean architecture, and usability. Experienced in **AWS, Docker and Firebase services**, with a strong foundation in **object-oriented programming, asynchronous systems and API design**. Seeking an **Associate Software Engineer / Junior Software Engineer** role to build scalable and efficient software systems.

PROFESSIONAL EXPERIENCE

Software Engineering Intern

Codelantic | 2025 – 2026

- Developed and maintained scalable **cross-platform mobile applications using React Native for Android and iOS**
- Designed and implemented **reusable, responsive UI components** to enhance user experience
- Integrated **RESTful APIs and managed asynchronous data flows** for seamless backend communication
- Worked with **Firebase services (FCM, Analytics)** for push notifications and user behavior tracking
- Collaborated in an **Agile development environment**, contributing to team discussions and feature delivery
- Debugged and resolved issues, improving **application performance, reliability and stability**
- Participated in **code reviews and Git-based version control workflows**

TECHNICAL SKILLS

Programming & Frameworks: Java (Spring Boot), JavaScript (React, React Native), TypeScript, Python (Django)

Mobile Development: React Native, Expo, Flutter (Learning)

Databases: PostgreSQL, MySQL, MongoDB, Firebase Firestore

Cloud & DevOps: AWS, Docker, Firebase (FCM, Analytics, Auth), Google Cloud (Basics)

Tools: Git, GitHub, Postman, VS Code

Core Concepts: Object-Oriented Programming (OOP), REST API Design, Asynchronous Workflows, State Management, Error Handling & Retry Logic, Modular Architecture

EDUCATION

BSc (Hons) in Software Engineering – Cardiff Metropolitan University (via ICBT Campus) | 2025

PROJECTS

Loan & Expense Management System

Spring Boot, React, TypeScript, PostgreSQL

- Designed and developed the entire system end-to-end**, including frontend, backend and database architecture.
- Built a **Spring Boot REST API** for loan lifecycle management (creation, updates, status tracking, guarantors, repayments).
- Implemented **repayment processing, payment history and reporting endpoints** for operational insights.
- Designed and integrated **audit logging mechanisms** to track administrative actions.
- Developed a responsive frontend using **React + TypeScript** with reusable components and role-based workflows.
- Implemented **authentication and role-based access control** for secure system usage.
- Optimized performance and maintainability through **modular architecture and clean state management**.
- Structured APIs to support **scalable integration with mobile and web applications**.

Calling Agent Mobile App (Restaurant System)

React Native, TypeScript, API Integration

- Led development of a mobile app for **executing and managing task-based “agents”**.
- Built an **agent execution UI** (selection, inputs, run status, results).
- Implemented **asynchronous workflows with API integration**.
- Improved reliability with **error handling, timeouts and retry mechanisms**.
- Structured codebase using **modular architecture for scalability**.

Smart CRM Dashboard (AI-Powered)

React, Django, MongoDB, Machine Learning

- Developed a CRM system with **AI-powered lead scoring and sentiment analysis features**.
- Built a dynamic frontend using React with **customer management, dashboards and role-based access**.
- Developed backend APIs using Django for **data processing and system integration**.
- Trained a machine learning model for **lead scoring and customer sentiment analysis** using prepared datasets.
- Integrated ML outputs into the application to enable **data-driven decision-making**.
